Document Control

Document owner	Linaq LLC
Platform	JackpotRush / JackpotRush.io / JackpotRush.info
Compliance Officer	Mark W. Munger
Executive sponsor	Adeep Gurung, Founder
Version / status	1.2.1
Prepared date	August 26, 2026
Effective date	Upon written execution by Linaq LLC management
Next review	At least annually; targeted independent review within 180 days following launch; and following a material change affecting AML/CFT/OFAC risk
Classification	Proprietary and Confidential
Related documents	Terms and Conditions; Official Sweepstakes Rules; Linaq JackpotRush Transaction Monitoring Procedure v1.0; applicable payment, redemption, geolocation, record-retention, incident-response, and provider procedures; Newman Law legal opinion dated August 8, 2026

1. Purpose and Scope

Purpose

Linaq LLC establishes this Anti-Money Laundering and Counter-Terrorist Financing (AML/CFT) and OFAC Compliance Policy to prevent, identify, investigate, escalate, and address money laundering, terrorist financing, sanctions evasion, fraud, payment abuse, and other financial-crime risks associated with JackpotRush. The policy establishes the standards, responsibilities, and required controls for Linaq's corporate compliance program.

JackpotRush is an online sweepstakes gaming platform that involves customer accounts, payments, promotional activity, and prize redemptions. Linaq applies a risk-based program proportionate to those activities and to its financial-service relationships.

Policy framework

Linaq uses relevant Bank Secrecy Act (BSA) and FinCEN risk-management principles, where appropriate to its operations, as part of the framework for its program. Linaq also applies applicable OFAC sanctions requirements, federal and state law, contractual financial-service requirements, and its approved internal policies and procedures.

Scope

- Linaq LLC, JackpotRush, related domains and applications, and each approved product or brand brought within this policy through documented approval.
- Customer onboarding, identity and age controls, payments, account activity, promotional activity relevant to financial-crime risk, prize redemptions, refunds, chargebacks, complaints, restrictions, and account closure.

- Owners, managers, employees, contractors, administrators, customer support, finance, technology, marketing, and service providers whose duties affect AML/CFT, sanctions, payments, monitoring, redemptions, or investigations.

2. Definitions

Term	Meaning in this policy
AML/CFT	Anti-Money Laundering and Counter-Terrorist Financing.
Approved provider	A third party approved by Linaq to perform a defined identity, payment, sanctions, geolocation, fraud, or related control under a written agreement or controlled procedure.
BSA	The Bank Secrecy Act and its applicable implementing regulations.
CIP and KYC	Customer Identification Program and Know Your Customer controls used to obtain, verify, and maintain customer identity information.
CDD and EDD	Customer Due Diligence and Enhanced Due Diligence used to understand and manage ordinary and elevated customer risk.
Customer	A person who creates or uses a JackpotRush account, makes a payment, participates in relevant platform activity, or requests a prize redemption.
OFAC	The U.S. Department of the Treasury's Office of Foreign Assets Control.
PEP	A Politically Exposed Person whose position or relationships may present elevated corruption or financial-crime risk.
Unusual activity	Activity that is inconsistent with expected customer behavior, available information, applicable controls, or legitimate use of the platform and therefore warrants review.

3. Governance and Responsibilities

Linaq management

Linaq management owns the corporate AML/CFT/OFAC program and is accountable for its adoption, resources, authority, operation, and effectiveness.

- Approve this policy, material risk parameters, program responsibilities, material exceptions, and corrective actions.
- Provide personnel, systems, provider relationships, information, and financial resources appropriate to the identified risk.
- Maintain truthful, complete, current, and consistent information for customers, financial institutions, service providers, regulators, and authorized reviewers.
- Provide the Compliance Officer with direct access to relevant personnel, systems, records, management, and material providers.

Compliance Officer

The Compliance Officer has authority to administer and oversee the program and direct access to Linaq management for material compliance matters.

- Maintain this policy, the supporting procedures, and the enterprise AML/CFT/OFAC risk assessment.
- Oversee customer controls, sanctions controls, monitoring, investigations, escalation, reporting coordination, records, training, provider reliance, independent testing, and corrective action.
- Evaluate compliance evidence and advise management concerning program effectiveness, material risk, exceptions, and required remediation.
- Escalate material matters to Linaq management and qualified legal counsel and recommend appropriate account, transaction, provider, or control actions.

Operational functions

- Operations and customer support perform assigned first-line controls, document customer contacts and decisions, preserve required evidence, and escalate unusual activity.
- Finance maintains payment, settlement, refund, chargeback, prize, redemption, reconciliation, and financial records and investigates material differences.
- Technology and security maintain authorized access, system configurations, logging, data protection, testing, change implementation, and incident response for relevant controls.
- Marketing follows current approved customer disclosures and promotion rules and escalates activity that presents financial-crime risk.

Qualified legal counsel

Qualified legal counsel advises Linaq on applicable legal obligations, sanctions actions, regulatory reporting, government or law-enforcement requests, and material legal changes affecting the program.

4. Risk-Based AML/CFT/OFAC Program

The Compliance Officer and the Compliance Department will maintain a written enterprise risk assessment tailored to Linaq's customers, products, geography, transactions, delivery channels, service-provider reliance, legal requirements, and financial-service relationships. The assessment will evaluate inherent risk, control effectiveness, and residual risk and will guide monitoring, review, staffing, training, and testing.

Risk domain	Representative factors
Customers	Identity confidence, age, residence, linked accounts, payment ownership, PEP exposure, complaints, and prior activity.
Transactions	Payment and redemption size, frequency, velocity, reversals, refunds, chargebacks, gameplay patterns, shared instruments, and source-of-funds indicators.
Geography	Residence, physical location, applicable restrictions, sanctions exposure, location conflicts, and evasion indicators.
Products and channels	Remote onboarding, account access, promotional activity, prize redemptions, account takeover, bots, collusion, and manual interventions.
Providers and legal requirements	Financial-service dependencies, control allocation, service performance, regulatory change, contractual requirements, and material incidents.

The risk assessment will be reviewed at least annually and following a material change in Linaq's business, products, jurisdictions, financial flows, providers, systems, regulations, or risk profile. Linaq will apply controls proportionate to the identified risk and document material risk decisions.

5. Customer Identification and Account Integrity

Linaq will maintain a risk-based Customer Identification Program (CIP) and Know Your Customer (KYC) framework appropriate to the customer functions, payment activity, and prize-redemption activity offered through JackpotRush.

- Obtain customer identity, age, contact, residence, and account information appropriate to the permitted activity and identified risk.
- Verify identity through an approved documentary, non-documentary, or provider-supported process at the control points established in Linaq's procedures.
- Require customers to satisfy applicable age and identity requirements before using restricted account functions or receiving prize redemptions.
- Identify duplicate, linked, fictitious, synthetic, nominee, anonymous, and unauthorized third-party accounts where appropriate to risk and available information.
- Require customer-owned payment methods and redemption destinations, subject to documented exceptions approved under Linaq's procedures.
- Escalate identity discrepancies, unsuccessful verification, related-account indicators, or suspected misuse and apply appropriate restrictions during review.
- Maintain complete and retrievable records of identity information, verification results, discrepancies, review, and disposition.

6. Customer Due Diligence (CDD) and Enhanced Due Diligence (EDD)

Customer Due Diligence

Linaq will assign and maintain risk-based customer profiles using available identity, geography, account, payment, redemption, transaction, promotional, gameplay, sanctions, fraud, complaint, and prior-history information. Customer risk will guide monitoring intensity, review frequency, information requests, approval authority, and account controls.

Enhanced Due Diligence

Enhanced Due Diligence will be applied when the identified risk warrants additional review. Linaq may obtain additional identity, address, payment-ownership, occupation, source-of-funds, source-of-wealth, relationship, or activity information when appropriate and lawful. These measures are risk-based and are not required for every customer.

- Apply enhanced review to material identity discrepancies, linked accounts, PEP exposure, elevated-risk geography, unusual size or velocity, third-party funding, multiple payment methods, chargeback history, sanctions indicators, or inconsistent source-of-funds information.
- Require Compliance Officer or authorized management approval for elevated-risk activity when the risk assessment or procedures require approval.

- Reassess the need to refresh customer information following a material account, payment, redemption, activity, location, complaint, provider, sanctions, fraud, or reinstatement event.
- Restrict or close activity when Linaq cannot obtain sufficient confidence in identity or cannot reasonably manage the identified risk.

7. OFAC and Sanctions Compliance

Linaq will maintain risk-based sanctions-screening controls through approved systems or providers. Linaq retains responsibility for the design, oversight, and effectiveness of the control when a third party performs screening services.

- Screen customers and relevant activity at the points established by Linaq's risk assessment, procedures, and financial-service arrangements.
- Use current sanctions data and an approved matching and review process appropriate to the service and identified risk.
- Place affected activity in an appropriate restricted or review status while a possible or confirmed match is evaluated.
- Escalate possible or confirmed matches to the Compliance Officer and obtain qualified legal guidance concerning reporting, blocking, rejection, recordkeeping, provider notice, or other required action.
- Maintain records of screening, potential matches, review, disposition, action, timing, and supporting evidence.
- Apply risk-based sanctions due diligence to a material counterparty when the relationship, geography, ownership, transaction, or applicable law presents a specific sanctions concern.

8. Payment and Prize-Redemption Controls

Linaq will use approved payment processors and financial-service providers and will maintain controls designed to establish payment ownership, transaction legitimacy, accurate funds flow, and valid prize redemptions.

- Use approved payment methods and authenticated customer-owned payment instruments and redemption destinations.
- Evaluate material inconsistencies among customer identity, payment ownership, residence, physical location, account activity, and redemption destination.
- Maintain accurate records and reconciliations for customer payments, settlements, refunds, reversals, chargebacks, prizes, and redemptions.
- Investigate material differences, repeated payment failures, unusual reversals, shared instruments, redirected redemptions, or other activity that may indicate fraud, laundering, account misuse, or unauthorized third-party activity.
- Confirm identity, account standing, applicable sanctions status, redemption legitimacy, and customer-owned destination before releasing a prize redemption.
- Comply with applicable tax-identification, information-reporting, withholding, and prize-payment requirements through approved finance and payout procedures.

9. Transaction and Activity Monitoring

Linaq will maintain risk-based automated and manual monitoring appropriate to its customers, payment activity, promotional activity, gameplay, prize redemptions, geography, sanctions exposure, and account behavior. The separate Linaq JackpotRush Transaction Monitoring Procedure establishes the approved monitoring rules, thresholds, alert severity, acknowledgement and escalation times, case-management requirements, change control, calibration, and validation controls. Linaq will review monitoring rules and thresholds for effectiveness and maintain them as controlled procedures.

Representative risk indicators

- Identity information, payment ownership, residence, device information, or physical location that conflicts or changes rapidly.
- Evidence of a possible system error, account takeover, or attempted circumvention of the one-account-per-individual KYC onboarding control, including unusual shared payment instruments or redemption destinations, coordinated device activity, or other related activity.
- Rapid purchases and redemptions, unusually limited gameplay before redemption, round-dollar patterns, unusual velocity, or attempts to divide activity across accounts or amounts.
- Repeated payment failures, refunds, reversals, chargebacks, account-takeover indicators, or changes to payment or redemption details shortly before a redemption.
- Promotion, bonus, referral, or AMOE abuse that creates financial-crime risk, including account manipulation, coordinated activity, or unusual award-to-redemption patterns.
- Collusion, bot activity, location manipulation, inconsistent platform and financial records, or activity designed to circumvent identity, payment, monitoring, or redemption controls.
- Sanctions indicators, unusual source-of-funds information, provider alerts, or customer explanations that conflict with available records.

These indicators are representative and do not limit Linaq's review of other activity that appears unusual, suspicious, inconsistent, or outside the expected use of the platform.

10. Investigations, Escalation, and Reporting

Investigation and escalation

Linaq requires unusual or suspicious activity to be identified, investigated, documented, escalated when appropriate, dispositioned, and retained. The Compliance Officer will oversee material investigations and coordinate account, transaction, provider, legal, and management actions according to risk and applicable procedures.

- Preserve relevant customer, account, payment, redemption, platform, provider, communication, and transaction records.
- Apply appropriate account or transaction restrictions during review when warranted by risk, contract, or law.
- Document the facts, analysis, decisions, approvals, actions, reporting determination, and required follow-up.
- Protect the confidentiality of investigations and reporting and use authorized internal and customer communications.

Regulatory and provider reporting

The Compliance Officer, qualified legal counsel, and the applicable financial institution or service provider will determine the appropriate reporting channel based on applicable law and the circumstances. Linaq will provide appropriate information and records to its financial institutions and will complete any direct filing or response required of Linaq under applicable law or an approved procedure.

11. Recordkeeping and Data Protection

Linaq will maintain complete, accurate, secure, retrievable, and audit-ready AML/CFT/OFAC records. Records will be retained for at least five years where applicable, or longer when required by law, contract, investigation, litigation hold, or an approved retention schedule.

- Customer identity, age, account, consent, verification, CDD, EDD, sanctions, and location-risk records.
- Payments, settlements, refunds, reversals, chargebacks, prizes, redemptions, reconciliations, and material account activity.
- Alerts, investigations, evidence, communications, dispositions, reporting records, approvals, account actions, and corrective actions.
- Policies, procedures, risk assessments, training, provider-control records, independent testing, management reporting, and material exceptions.

Access to personal, financial, identity, and investigation records will be limited to authorized roles and protected through approved access, transmission, storage, logging, retention, and disposal controls.

12. Training and Awareness

Personnel and contractors whose duties affect AML/CFT, sanctions, customer identification, payments, transaction monitoring, prize redemptions, investigations, or reporting will receive role-appropriate training before performing the relevant function and periodic refresher training thereafter.

Training will address the policy, relevant risk indicators, escalation responsibilities, confidentiality, and the consequences of bypassing controls. Linaq will document attendance, completion, and material remediation and will provide targeted updates following significant legal, product, provider, control, or incident changes.

13. AML-Related Service Provider Oversight

Linaq may rely on qualified service providers to perform defined identity, payment, sanctions, geolocation, fraud, or related controls. Linaq retains ownership and oversight of its AML/CFT/OFAC program and remains responsible for determining that the combined control environment is appropriate to its risk.

- Use providers appropriate to the service, risk, and applicable legal or contractual requirements.
- Understand and document the AML-related service performed by each material provider and the responsibilities retained by Linaq.

- Maintain appropriate agreements, access to material control information, escalation channels, and record availability.
- Monitor material service performance and address significant deficiencies, outages, control failures, or unresolved exceptions through corrective action.

14. Independent Testing and Corrective Action

Linaq will arrange independent testing of the AML/CFT/OFAC program at least annually by a qualified individual or organization sufficiently independent of the activities being tested. Testing will evaluate the design and operating effectiveness of governance, risk assessment, customer controls, sanctions controls, transaction monitoring, investigations, reporting, records, training, provider reliance, and prior corrective actions.

Before accepting live customer payments or processing live prize redemptions, Linaq will complete and document an internal pre-launch go-live validation of the applicable AML/CFT/OFAC controls, including the configured transaction-monitoring rules, alert-routing paths, payout holds, escalation workflow, and case-management records.

Linaq will obtain a targeted independent review within 180 days after launch to assess the initial operation of the AML/CFT/OFAC program and the design and operating effectiveness of transaction-monitoring controls using meaningful live activity, where available.

Linaq will obtain additional independent testing when a material change, incident, control deficiency, or other risk event warrants further assurance, including:

- a new or materially changed payment processor, KYC provider, sanctions-screening provider, geolocation provider, fraud-control provider, or other material AML-related service provider;
- a material change in products, prize-redemption flows, customer geography, payment methods, account functions, transaction-monitoring technology, or risk profile;
- a material control failure, significant fraud event, sanctions issue, suspicious-activity incident, payment-provider concern, material chargeback trend, or audit finding;
- a significant increase in transaction volume or redemption volume; or
- the need to validate remediation, compensating controls, or a material threshold or rule change.

Findings will be documented, risk-rated, assigned to responsible owners, tracked to completion, and reported to management. Material deficiencies will receive timely interim protection and validation of corrective action.

15. Prohibited Activities

Linaq prohibits conduct that undermines AML/CFT, sanctions, identity, payment, monitoring, fraud-prevention, or prize-redemption controls, including:

- Fictitious, synthetic, anonymous, nominee, duplicate, or unauthorized third-party customer accounts.
- Use of another person's identity, payment method, account, or redemption destination outside an approved documented exception.
- Structuring, layering, sanctions evasion, false customer information, or concealment of the source, ownership, movement, or destination of funds.

- Location manipulation or circumvention of applicable geographic controls when relevant to identity, fraud, sanctions, payment, or financial-crime risk.
- Collusion, bot activity, promotion abuse, or coordinated activity used to manipulate accounts, payments, platform activity, awards, or redemptions.
- Circumvention of customer-identification, payment-ownership, monitoring, investigation, sanctions, account, or redemption controls.
- Unauthorized disclosure of an investigation, sanctions matter, reporting decision, or confidential customer information.

16. Management Reporting and Material Change Review

Management reporting

The Compliance Officer will report material AML/CFT/OFAC risks, significant investigations, relevant trends, control deficiencies, provider issues, exceptions, and corrective actions to Linaq management at a frequency appropriate to risk and circumstances. Material matters requiring prompt action will be escalated without waiting for a periodic report.

Material change review

Material changes to Linaq's business, products, jurisdictions, financial flows, providers, systems, regulations, or risk profile will be evaluated for AML/CFT/OFAC impact. Linaq will update affected risk assessments, controls, policies, procedures, training, monitoring, and testing as appropriate, including independent testing when required by Section 14, and will preserve evidence of material decisions and implementation.

17. Policy Administration and Enforcement

The Compliance Officer will review this policy at least annually and following a material change affecting the program. Linaq management will approve each version. Superseded versions will be marked inactive and retained under the approved retention schedule.

Personnel, contractors, and providers performing assigned controls will follow this policy and the applicable procedures. Violations will be documented and addressed through appropriate retraining, access restriction, corrective action, contract remedies, suspension, termination, account action, provider notice, or legal escalation. Approved exceptions will identify the business reason, risk assessment, approver, compensating controls, duration, review date, and supporting evidence.

Appendix A: AML/CFT/OFAC Procedures and Internal Controls

This appendix describes the core procedures and internal controls used to implement the policy. Linaq may maintain more detailed thresholds, system configurations, provider instructions, forms, and control evidence in separately controlled procedures. A procedural update that remains consistent with the policy may be approved through Linaq's document-control process without revising the policy body.

A.1 Customer identification and account review

- Collect the identity, age, contact, residence, and account information required by the approved customer journey and identified risk.
- Submit the customer to the approved verification process at the required control point and preserve the result and reference information available to Linaq.
- Place unresolved, unsuccessful, inconsistent, or elevated-risk verification results into the appropriate review or restricted status.
- Review duplicate and linked-account indicators, payment ownership, prior history, and available provider information and document the disposition.
- Apply CDD or EDD according to the customer risk and obtain additional information only when appropriate to the identified risk.

A.2 Payment and prize-redemption review

- Confirm that the customer, payment method, and redemption destination are appropriately authenticated and consistent with the approved account information.
- Review material payment failures, reversals, chargebacks, shared instruments, redirected redemptions, recent account changes, unusual velocity, and provider alerts.
- Confirm the required identity, sanctions, account, balance, activity, and destination conditions before releasing a prize redemption.
- Reconcile platform, processor, settlement, refund, chargeback, prize, and redemption records according to the approved finance procedure and escalate material differences.
- Complete tax identification, reporting, withholding, and prize-payment steps through the approved finance or payout procedure.

A.3 Geolocation risk indicators

Linaq will use an approved geolocation control and the current jurisdiction restrictions maintained in the applicable legal and operating documentation. Location information will be evaluated as an AML/CFT, sanctions, identity, payment, or fraud indicator when it conflicts with residence, payment country, device information, account history, or customer statements.

- Escalate repeated attempts to circumvent geographic restrictions, location manipulation, impossible travel, material location conflicts, or unexplained changes associated with payments or redemptions.
- Preserve the location evidence available to Linaq, the review performed, the disposition, and any account or transaction action.

A.4 Monitoring, alert, and case handling

Monitoring alerts and referrals will be handled through the controlled workflow established in the Linaq JackpotRush Transaction Monitoring Procedure. That procedure governs detailed rule identifiers, threshold limits, routing, alert severity, acknowledgement and disposition service levels, payout holds, escalation, case records, threshold approvals, change control, and effectiveness review. Operational personnel will follow the current approved procedure and preserve required evidence.

Step	Procedure
1	Create the alert or case and preserve the relevant customer, provider, platform, payment, account, communication, and transaction records.
2	Assign the matter according to risk and apply the appropriate account or transaction status during review.
3	Review identity, payment ownership, funds flow, account activity, promotional activity, location, sanctions, fraud, complaints, and prior history as relevant.
4	Document information requests, evidence, analysis, findings, decisions, approvals, and required follow-up.
5	Escalate material activity to the Compliance Officer, management, qualified legal counsel, and the applicable financial institution or provider as appropriate.
6	Close the case with a documented disposition, account or transaction action, reporting determination, retention category, monitoring adjustment, and follow-up.

A.5 Sanctions alert response

- Place affected activity into the appropriate restricted or review status and preserve the screening result and related records.
- Compare the available identifiers, aliases, dates, addresses, nationality, identification numbers, and other relevant information to evaluate the potential match.
- Escalate unresolved or confirmed material matches to the Compliance Officer and qualified legal counsel.
- Complete required blocking, rejection, reporting, provider notice, account action, customer communication, and recordkeeping through the approved legal and provider procedure.

A.6 Case records and retention

Each material case record will identify the case, source, customer and related accounts, relevant transactions and activity, risk level, evidence, investigation steps, analysis, information requests, decisions, approvals, communications, account or transaction actions, reporting determination, corrective action, final disposition, follow-up, and retention category. Records will be stored in the approved restricted system and retained under the applicable schedule.

Approval and Signatures

By signing below, Linaq LLC management adopts and owns this corporate AML/CFT/OFAC program. The Compliance Officer approves this policy as an appropriate compliance framework and acknowledges the appointment to administer, oversee, monitor, advise, evaluate, and escalate matters under the policy. Linaq management retains ownership of the program, and operational functions and contracted providers remain responsible for the controls assigned to them.
